

Sustainability & Risk Management Statement

Our approach to sustainability and risk management is based on the following principles:

1. Health, Safety & Environment (HSE)

We enforce strict compliance with international and local HSE standards. Our safety culture ensures zero-tolerance for unsafe practices, proactive hazard identification, and continuous improvement in site safety management.

2. Operational Reliability

Through robust planning, quality assurance, and risk controls, we consistently deliver projects on time and to specification. Our clients can rely on us to maintain high standards of workmanship while minimizing disruptions.

3. Workforce Responsibility

Our people are our strength. We invest in continuous training, fair treatment, and professional development to ensure a skilled, motivated, and responsible workforce. This reduces turnover risks and ensures knowledge continuity.

4. Sustainable Supply & Resource Use

In trading, material supply, and manpower support, we adopt efficient and transparent practices. We seek to optimize resources, reduce waste, and promote responsible sourcing wherever possible.

5. Partnership & Long-Term Value

We are committed to building trusted relationships with clients by providing reliable services, transparent communication, and consistent support. Our focus is on creating lasting value rather than short-term gains.

In summary, Eshraqt Al-Badr integrates sustainability and risk management into every aspect of its operations. By prioritizing safety, reliability, people, and environmental responsibility, we safeguard our clients' reputation, ensure project success, and contribute positively to the communities in which we operate.
